

THE AUSTRALIAN NATIONAL UNIVERSITY

SAMPLE Second Semester Examination – not a real one

RELATIONAL DATABASES

(COMP2400/6240)

Reading Time: 15 minutes

Writing Time: 2 hours for COMP2400 2½ hours for COMP6240

Permitted Materials: One A4 sheet with notes on both sides

Notes may be handwritten or printed/typed

The A4 sheet may be a photocopy

Total Marks: 60 for COMP2400 75 for COMP6240

- If your examination paper is missing any pages, or if any pages are illegible, raise your hand and ask for another examination paper.
- In addition to the examination paper, you should have received a sheet of scribble paper.
- All answers must be written on the examination paper.
- Write your student number on every page.
Write your name on this cover sheet in UPPER CASE.
- At the end of the examination, hand in your A4 sheet of notes and your scribble paper as well as your examination paper.
- Your A4 sheet of notes and your scribble paper will be destroyed.
- **Only the examination paper will be marked.**
- *If you are ill during the examination, or otherwise suffer adverse circumstances during the examination, advise an invigilator immediately.*

STUDENT NUMBER:

--	--	--	--	--	--	--

FAMILY NAME:

GIVEN NAME:

--	--

STUDENT NUMBER:

--	--	--	--	--	--	--

GENERAL INSTRUCTIONS

- ⌘ **Write all your answers on the examination paper.**
- ⌘ Write your Student Number *neatly*, especially on the pages which contain a Part header (eg Page 3).
- ⌘ Do **not** write in the boxes in the Part headers.
- ⌘ All answers should be written legibly, preferably in blue or black ink or in very dark pencil (eg 2B). Do **not** write in red ink.
- ⌘ **Answer all questions in the context of the material covered in this course,** including the assignments for this course.
- ⌘ More marks will be awarded for answers that are simple, short and concrete than will be awarded for answers that are of a sketchy or rambling nature.
- ⌘ Generally, an understanding of the material is sufficient. Do not include lecture outlines or solution notes.
- ⌘ You may ask for clarification of anything especially if you suspect that there is a typo.
- ⌘ However, you should **not** ask for help with answering any of the questions.

for COMP2400 only

- ⌘ **There are *no* optional questions on this examination paper.**

for COMP6240 only

- ⌘ **Part F MISCELLANEOUS contains optional questions.**
- ⌘ Part F MISCELLANEOUS is the ***only*** Part which contains optional questions.

STUDENT NUMBER:

--	--	--	--	--	--	--

Part A (10 marks)**TRUE/FALSE**

Nominate whether each of the following statements is true or false by circling either True or False after each statement on this paper.

You will receive *1 mark* for each correct nomination;
zero marks for each absent nomination.

You will lose *1/2 mark* for each incorrect or unclear nomination.

- (1) {r, a, t, h, e, r} is a set.

Assignment Project Exam Help

-

<https://eduassistpro.github.io/>

- (2) $\{x, y\}$ is a subset of $\{x, y\}$.

Add WeChat edu_assist_pro

- True

- (3) A prime attribute in a relation is an attribute which is a subset of at least one candidate key of the relation.

- True

- False

- (4) In the term superkey, “super” means “very good”.

- True

- False

STUDENT NUMBER:

--	--	--	--	--	--	--

(5) All relations with primary keys are in BCNF.

- **True**
- **False**

(6) A relation which is in 3NF is in 2NF.

- **True**
- **False**

(7) “Relation” is just a shorter way of writing “relationship”.

Assignment Project Exam Help

- **True**
- **False**

(8) Foreign ke

<https://eduassistpro.github.io/>

- **Add WeChat edu_assist_pro**

(9) The concept of a transaction provides a mechanism for describing logical units of database processing.

- **True**
- **False**

(10) All transactions should maintain a database's integrity.

- **True**
- **False**

STUDENT NUMBER:

--	--	--	--	--	--	--

Part B (10 marks)**SHORT ANSWER**

Complete the following truth table.

You will receive up to 2 marks for your answer.

p	q	p OR q
T	T	
T	F	
F	T	
F	F	

Assignment Project Exam Help

<https://eduassistpro.github.io/>

Complete each of the following sentences using

The length of the line in the sentences is constant. The length of the answer to be supplied.

sarily indicate

You will receive up to 1 mark for each answer;
zero marks for each absent or incorrect answer.

(1) Given the relational schema

WidgetSupplier (W_no, S_code, [pk] W_cost)

and the associated functional dependency

 $W_no \rightarrow W_cost$

W_cost is _____ dependent on {W_no, S_code}.

STUDENT NUMBER:

--	--	--	--	--	--	--

The three types of modification anomaly are:

(2) _____

(3) _____

(4) _____

When considering database transactions, ACID stands for:

(5) _____ <https://eduassistpro.github.io/>

(6) _____ Add WeChat edu_assist_pro

(7) _____

(8) _____

STUDENT NUMBER:

--	--	--	--	--	--	--

Part C (10 marks)**C****SQL**

Write SQL queries to answer each of the questions on the following pages.
Write *one* statement for each question.

The relational schemas for the tables against which the queries will be run:

Actor (ActorId, [pk] ActorName, BirthPlace, Nationality, YearBorn, YearDied, Sex)

ActsIn (MovieId [fk1], ActorId [fk2], [pk] StarsIn)

Customer (CustomerId, [pk] CustomerName, CustomerAddress, CustomerPhoneAH, CustomerPhoneBH)

Director (DirectorId, [pk] DirectorName, YearBorn, YearDied)

ating, Classification, (M No Ce

MovieExec (CertNo, [pk] Name, Address, Net

Studio (StudioName, [pk] Address, CertNo

Video (VideoId, [pk] StockDate, SupplierName, *SoldTo* [fk1], *MovieId* [fk2])

Simplified syntax for the SQL select command:

```
select [distinct] <select_list>
from <table_list>
[where <boolean_condition>]
[group by <column_list>]
[having <boolean_condition>]]
[order by <column_list>];
```

STUDENT NUMBER:

--	--	--	--	--	--	--

You will receive up to 5 marks for your answer to the following.

- (1) Which actor has starred in the most movies?

Part D (10 marks)**INTEGRITY****SQL, Bugs, and Rock 'n' Roll Database**

This is a music database that catalogues certain albums released by certain artists, and the musicians who contributed to each album.

Relational Schema

Album (Album_Id, Title, Label, Year, Artist_Id)

Artist (Artist_Id, Name)

Gig (Al

Musician (Musician_Id, Family_Name, Given_Name, Birth_Date, Birth_Country, Death_Date, Death_Country)

Informally, the tables may be described as follows:

Artist

Identifiers and names of artists who release albums.

The name of an artist is a string of characters that might appear on the cover or spine of albums released by that artist, and has no formal relationship with a musician who might have a similar name!

Musician

Identifiers, names, birth and death details of musicians.

Album

Identifiers, titles, artists and release details of albums.

Gig

Correspondences between musicians and albums.

A musician may contribute to many albums.

Many musicians may "play a gig" (or just "play") on a particular album.

STUDENT NUMBER:

--	--	--	--	--	--	--

For each of the following rules, specify appropriate constraints that will ensure that the data in the SQL, Bugs, and Rock 'n' Roll Database is consistent with the rule. Use the constraint syntax available in the Oracle 9i CREATE TABLE command. You must identify the name of the table in which the constraint is to be placed, and any other relevant information, but you do not have to write out the full CREATE TABLE command for each rule.

If it is not possible to ensure adherence to a rule in this way, briefly explain why not.

You will receive up to 2 *marks* for your answer for each rule.

- (1) All albums must be released by a label.

Assignment Project Exam Help

<https://eduassistpro.github.io/>

Add WeChat edu_assist_pro

- (2) Only musicians who are listed in the Musician table may play on gigs.

STUDENT NUMBER:

--	--	--	--	--	--	--

- (3) Musicians cannot play gigs for albums which were released before they were born.

- (4) The Gig table must have a primary key, formed from one or more attributes shown in the relational schema for the table.

Part E (20 marks)**RELATIONAL THEORY**

Below are three relations with their associated minimal FD diagram or minimal FD list.

For each relation,

- List the candidate key(s) of the relation.
- Nominate the highest normal form (1NF, 2NF, 3NF, or BCNF) of the relation.

You will receive up to 1 mark for listing the candidate key(s).

If the candidate key(s) you nominate is(are) correct,

you will receive
of the relation

normal form

You must enclose each candidate key in braces *ie* {<candidate key>}

You will lose up to 1 mark if you do not enclose
in braces.

date key

You do not need to show your working.

Question 2

The Video Store (TVS) is thinking of adding a column *SoldDate* to its *Video* table.
The current structure of the *Video* table is:

Video (*VideoId*, [pk] *StockDate*, *SupplierName*, *SoldTo* [fk1], *MovieId* [fk2])

If TVS were to do this, what domain should be specified for *SoldDate*?
And what integrity constraints should be added to the updated table?
